

Enbo Jiang

Enbo Jiang, Male, Master, Research librarian of Chengdu library and information center, Chinese Academy of Sciences (CAS). He has been engaged in the development and construction of digital library platform. He went to study and communicate at the school of Library and Information Science at Kent State University of the United States as a visiting scholar of CAS. Nowadays Enbo mainly focused on the construction of open resources systems, the integration of open scientific literature and data, and the construction of precision information services. Recently, he has hosted and participated in such projects as: the Major Programs of CAS during the 9th Five-Year Plan Period, the West Light Foundation of CAS, the Knowledge Innovation Project of CAS. He has also published more than 20 academic articles.

The organization of information is one of the most important research directions of the Library Science. Information can be used deeply and fully only if it is organized from out-of-order into ordered. The focus of this direction is how the academic libraries , under the Internet and semantic web environment, use information technology to collect, organize, semantize and link the various types of information resources so as to make them ordered and construct an environment from information to knowledge. The main research areas include the theories of information organization; the semantic description of information resources; the annotation of information; linked open data and the visualization of the information resources.
