### **Research Direction**

User research and information services. Users and services are the core and focus of library science and information science. In the network and digital environment, the characteristics of users' information needs and the use of information have undergone great changes, and they have also brought new challenges for the service of library and information service. Carrying out research on user needs and behaviors in a new environment, and applying information technology to establish a new information service system based on user needs is an important research topic that needs to be studied at present. This research focuses on the research and discussion of new information service theories, techniques and methods in the network digital environment, user cognition and behavioral change, information service system construction and its organization management, development and innovation of information services.

### **Achievements And Awards**

She has published more than 30 papers and 4 research projects are doing now. In November 2005, she was awarded the "Sichuan Youth Science and Technology Award" by the Organization Department of the Sichuan Provincial Party Committee, the Sichuan Provincial Personnel Department, and the Sichuan Science and Technology Association.( SCAST(2005) No. 45). In 1998, as the leader of the project "Study on the Development of the Secondary Document Database of SPIE" won the third prize of Sichuan Science and Technology Progress Award in 1998(Certificate number 98-3-0589, ranking 1).
