Chen Zhaohui: Male, he was born in November 1969. He graduated from library and information major of Xiangtan University, and the Master of the National Science Library, Chinese Academy of Sciences. And he is currently research librarian and director of Science and Culture Communication Center of the National Science Library. He has been engaged in information service for a long time in the center. His main work and research fields include: computer retrieval, network reference consultation, science and technology novelty retrieval service, organization and management of Library Information Service under the network environment, library science and culture dissemination service, etc. He has not only organized and participated in the R & D and service of several projects of the National Science Digital Library of the Chinese Academy of Sciences, but also worked in Documentation and Information Center for Postgraduate Information Exchange Studio and Learning Common Space Construction Project. He is currently engaged in Library Science and culture dissemination services and research work, currently participated in the construction of Innovative Culture Plaza of Chinese Academy of Sciences, annual exhibition of scientific and technological innovation of Chinese Academy of Sciences, Academician Library of Chinese Academy of Sciences, Popular Science Resources Information Database of Chinese Academy of Sciences, and the construction and service of Science and culture communication network platform. He has accumulated rich theoretical basis and practical experience, and published more than 30 papers.

With the rapid development of global information technology and the advent of the digital age, libraries have also entered the form of composite libraries, and the traditional reader service of library is facing unprecedented challenges. How to continuously develop library's reader service work according to changes in environment and trend and how to explore user information service in the digital and networked environment are new topics which the global library community is facing. The research direction of user research and information services focuses on the following issues: new information service theories, technologies and methods in the network digital environment; changes in user forms and demands; design of new service models of libraries; research on new physical space organization and functions of libraries; analysis of user research and service effects; the construction of library-based integrated service mechanism construction based on open sharing; the role and practice of Libraries in the dissemination of science and culture, and how libraries play an effective role of resources and service platforms in the integration of science and technology, economy, culture and society.
